**CERTIFICATION OF TESTING — EAR-CONTROLLED DATA
ALL TESTING PERFORMED IN A MERCURY-FREE ENVIRONMENT**

Corrected certification 7/13/11

PART NUMBER	5749613-143
DESCRIPTION	½-13 x 2 3/8 HHCS Coated with Armorgalv thermal diffusion process*
SPECIFICATION	SAE-J429 Jan 99 Gr. 8

Stress Durability Results

Tested in accordance with NASM1312 #5

Five fasteners were assembled into a fixture and loaded to a torque value of 71 foot-lbs. This value is approx. 80% of the rated tensile strength of the fasteners. The test samples were maintained for 48 hours to allow for possible hydrogen embrittlement. After the 48 hour period, the samples were removed from the fixture and tested by fluorescent magnetic particle inspection to detect any cracks or linear indications. The results of this inspection show that there were no cracks, linear indications, and/or evidence of hydrogen embrittlement. NDT test reports on file. NDT tests were performed in accordance with applicable specifications.

Tested samples do conform to specification requirements.

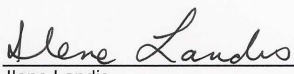

Formula for obtaining torque values, $T = KDL$
 $T = \text{torque}$ $K = \text{friction factor}$ $D = \text{dia}$ $L = 80\% \text{ min tensile load}$
 $\text{Torque} = .1 \times .5 \times 17,040 = 852 \text{ in-lbs} \div 12 = 71 \text{ ft-lbs}$

"K" Determined per IFI 7TH Ed., Technical Data N-68
using MIL-T-5544 Anti-Seize Lubricant.

Pass

Five tests listed on this certification have been performed in accordance with SAE-J429 Jan 99 Gr. 8 and all tested samples do conform to the specification requirements.
